HOSPITAL RAJA PERMAISURI BAINUN

FLOWCHART REPORTING OF HEALTHCARE WORKER DIAGNOSED WITH COVID-19

*UKI will advise location for terminal cleaning accordingly

COVID-19 Outbreak Management In Healthcare Facilities

1. Identification of close contacts

A) Healthcare worker (HCW)

Any HCW in direct contact with a COVID-19 patient, within 1 meter > 15 minutes, without appropriate PPE (mask and eye protection) and/or experienced failure of PPE.

B) Patient/visitor/caretaker

Anyone in same ward/room OR shared same bathroom OR was in same treatment care area/indoor waiting area (especially a close, confined indoor area) who spent > 15 minutes within 1 meter with a confirmed case; OR other situations as dictated by a risk assessment

2. Brief unprotected exposure in a close, poor ventilation area should also be considered significant

3. Contact is identified by investigating the movements of index cases through the facility. Information can be obtained via interviews of persons and analysing facility floor-plan or CCTV footage

4. Consider exposure in a patients/HCW who shared or used a space that index patient used where adequate disinfection may not have occurred. – e.g. procedure room, toilet.

5. If index case is a HCW, attention should be paid to work areas and shared spaces (pantry, changing/prayer rooms, toilets, computer/work spaces);

6. Consider exposure in patients/HCW who share transportation with index case (transport ambulance)
